EDUCATION

Gokaraju Rangaraju Institute of Engineering and Technology

Nov2022 - June2026

Bachelor of Engineering in Computer Science and Business Systems : CGPA (8.59/10)

Hyderabad, India

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript.

Backend & Tooling: Node.JS, Express, FastAPI, Git

Data Engineering: Apache Spark, Apache Kafka, Apache Iceberg, PostgreSQL, Snowflake

Cloud & Infrastructure: AWS, Docker, Kubernetes, Vercel, GitHub Actions

AI/ML: Generative AI, Agentic AI, Machine Learning

PROJECTS

ALPHAVISION - AI driven Stock Analysis Platform | [Github](#)

Technologies Used: Python, Streamlit, Strands Agent SDK, Bright Data MCP , AWS Bedrock, EC2 , Qwen 2.5 7B

- Built Alphavision, a real-time financial signals agent using the Strands Agent SDK with Bright Data MCP integration, collecting live market data across US and Indian (NSE/BSE) equities to generate actionable BUY/SELL/HOLD signals.
- Architected a hybrid dual-model pipeline - AWS Bedrock (Nova Premier) for structured technical extraction (price, RSI, moving averages) and a locally-hosted Ollama model (Qwen 2.5 7B) for sentiment synthesis across news and social media running as parallel analysis threads with file-based thread communication.
- Designed an interactive Streamlit dashboard with Plotly visualizations including signal confidence gauges, risk-reward comparison charts, and a 7-day sentiment trend radar across Twitter, Reddit, and StockTwits, enabling auto-updating, real-time investment decision support.

BioscopeAI - Urban Biomass Prediction System | [Bioscope](#)

Technologies : Python, FastAPI, React, TypeScript, TensorFlow, Google Earth Engine, Sentinel-2 API.

- Built an end-to-end geo-spatial ML system combining CNN with LSTM for urban vegetation monitoring, achieving 92.3% prediction accuracy on satellite data from Sentinel-2, MODIS, and Landsat sources across pan-India coverage.
- Implemented scalable API architecture with FastAPI handling real-time satellite data processing, automated heatmap generation, and regional subdivision analysis for 45+ cities.
- Designed interactive visualization dashboard with React featuring dynamic biomass heatmaps, comparative satellite imagery overlays, and predictive analytics for carbon sequestration.

Real-Time E-Commerce Analytics Pipeline | [Github](#) | [Blog](#)

Technologies : Python, SQL, Apache Kafka, Apache Spark, Snowflake, Docker

- Engineered a Kafka-based streaming pipeline implementing a 3 layer Medallion architecture (Bronze → Silver → Gold) to enable incremental ingestion, transformation, and aggregation of e-commerce event data.
- Applied PySpark Structured Streaming with checkpointing and micro-batch processing, and integrated Snowflake as the analytical layer to enable end-to-end data flow from ingestion to Gold tables, supporting near real-time dashboards for business insights such as conversion analysis.

AWARDS, CERTIFICATIONS AND LEADERSHIP EXPERIENCE

- Awarded second Place in the TechXcelerate hackathon conducted at **IIT Hyderabad**
- Awarded Third Place in the TechXcelerate hackathon conducted at **BITS Goa**
- Won second prize in DevTalks'24 conducted by Google Developers Club in Griet
- Edu-skills Android Developer Virtual Internship - GOOGLE FOR DEVELOPERS
- Oracle Cloud Infrastructure AI Foundations Associate
- Google Cloud Career Readiness Certificate - Cloud Computing Foundations
- Street Cause-GRIET, Vice-president
- TEDX GRIET, Sponsorship Lead
