

GANDAMALLA SRUJAN KRISHNA

Hyderabad, Telangana | +91-9849386035 | srujan.krishna1@gmail.com | [LINKEDIN](#) | [GITHUB](#)

EDUCATION

Gokaraju Rangaraju Institute of Engineering and Technology

Bachelor of Engineering in Computer Science and Business Systems : CGPA (8.57/10)

Sri Chaitanya Junior College,TSBIE

Intermediate : MPC (97.4%)

Sri Chaitanya Techno School,SSC

10th Grade : GPA (9.7/10)

Nov 2022 - June 2026

Hyderabad, India

June - 2021

Hyderabad, India

June - 2019

Hyderabad, India

TECHNICAL SKILLS

Languages: Python, SQL

Data Engineering: Apache Spark (PySpark), Apache Kafka

Data Platforms & Storage: PostgreSQL, Snowflake, Apache Iceberg

Cloud & Infrastructure: AWS, Docker, Kubernetes

Tools: Git, Apache Superset, Generative AI

PROJECTS

Automated Weather Data ETL Pipeline | [Github](#)

Technologies : Python, AWS S3, PostgreSQL, Dbt, Apache Airflow, Apache Superset, Docker

- Designed a containerized batch pipeline to ingest weather datasets from AWS S3 (NOAA ISD) into PostgreSQL, orchestrated using Apache Airflow with 5-minute scheduled workflows.
- Transformed and modeled data using dbt across 2 layers (staging and mart), incorporating data quality checks for null values and duplicate records.
- Built interactive dashboards in Apache Superset to visualize 3+ weather metrics (e.g., temperature, wind speed, humidity), with auto-refresh enabled every 5 minutes to reflect scheduled data ingestion and support real-time trend analysis.

Real-Time E-Commerce Analytics Pipeline | [Github](#) | [Blog](#)

Technologies : Python, SQL, Apache Kafka, Apache PySpark, Snowflake, Docker

- Engineered a Kafka-based streaming pipeline implementing a 3 layer Medallion architecture (Bronze → Silver → Gold) to enable incremental ingestion, transformation, and aggregation of e-commerce event data.
- Applied PySpark Structured Streaming with checkpointing and micro-batch processing(~5 seconds), achieving ~650–900 events/sec sustained processing throughput in a Docker setup.
- Integrated Snowflake as the analytical layer, enabling end-to-end data flow with <30 seconds latency from ingestion to Gold tables, and supporting near real-time dashboards for business insights such as customer behavior and conversion analysis.

BioscopeAI - Urban Biomass Prediction System | [bioscope](#)

Technologies : Python, FastAPI, React, TypeScript, Tailwind CSS, TensorFlow, Keras, Google Earth Engine, Sentinel-2 API.

- Built an end-to-end geo-spatial ML system combining CNN feature extraction with LSTM temporal analysis for urban vegetation monitoring, achieving 92.3% prediction accuracy on multi-spectral satellite data from Sentinel-2, MODIS, and Landsat sources across pan-India coverage.
- Implemented scalable API architecture with FastAPI handling real-time satellite data processing, automated heatmap generation, and regional subdivision analysis for 45+ cities, reducing analysis time from hours to <60 seconds per region.
- Designed interactive visualization dashboard with React featuring dynamic biomass heatmaps, comparative satellite imagery overlays, and predictive analytics for carbon sequestration.

CERTIFICATIONS, AWARDS AND LEADERSHIP EXPERIENCE

Edu-skills Android Developer Virtual Internship - GOOGLE FOR DEVELOPERS

Oracle Cloud Infrastructure AI Foundations Associate

Google Cloud Career Readiness Certificate - Cloud Computing Foundations

Won second prize in DevTalks'24 conducted by Google Developers Club in Griet

Awarded second Place in the Tech-Xcelerate hackathon conducted at IIT Hyderabad

Awarded Third Place in the TechXcelerate hackathon conducted at BITS Goa

Street Cause-GRIET,Vice-president 2024 – 2025

TEDX GRIET, Sponsorship Lead 2024 - 2025
